

# NATTHAWAT SEINGCHIN

Chonburi, TH | [ntwork.ca@gmail.com](mailto:ntwork.ca@gmail.com) | [linkedin.com/in/ntwsc](https://linkedin.com/in/ntwsc) | [github.com/thedramaboy](https://github.com/thedramaboy) | [domenatthawat.com](https://domenatthawat.com)

## SUMMARY

Data-oriented developer and analyst with an engineering background in the oil & gas sector. As an inspection engineer at a petrochemical maintenance company, I built Power BI dashboards during plant shut down. Since moving into software, I've deepened my SQL and data-modeling skills across production applications - querying, validating, and troubleshooting relational data and building analytics/KPI dashboards

---

## SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SQL

Frontend: React, Next.js (App Router), Vite, shadcn/ui, Tailwind CSS, MUI, Recharts, React Native (Expo)

Backend: Node.js (Express), Prisma ORM, REST API design, JWT auth,

Databases: PostgreSQL, Supabase (Auth, Storage), Firebase/Firestore, MySQL, MongoDB

Tooling: Git/GitHub, Claude code terminal, Vercel, Railway

Certifications: Microsoft Azure Fundamentals, AWS Certified Cloud Practitioner

---

## EXPERIENCE

**GoApricot** | Software Developer (Intern) | Calgary, AB | Jul 2025 - Jun 2026

- Primary developer on three client web applications, delivering React/Next.js user interfaces end-to-end - from requirements through REST API integration to production UI.
- Worked in an Agile team with PR-based Git workflow and code reviews; owned features from concept to release.
- Built data-driven dashboards and KPI reporting views for an e-commerce client.

**Fastwork** | Full-stack Developer (Freelancer) | Remote | Sep 2025 - Present

- Maintained and extended a production React Native (Expo) mobile app, including bug fixes, UI refinements, and new features, and shipped releases to the Google Play Store via Expo EAS.
- Implemented Supabase Auth with role-based access control, and integrated GPS location services and third-party APIs.

**GC Maintenance and Engineering (GCME)** | Inspection Engineer | Rayong, TH | Jan 2020 - Jan 2021

- Built automated Power BI dashboards (Microsoft Power Platform) that cut manual reporting time by approximately 35%, converting raw industrial inspection data into structured summaries that enabled data-driven decisions for engineering teams.
- 

## SELECTED PROJECTS

**QueueMeIn - Clinic appointment and queue management system**

- Built and deployed a full React + Vite SPA using shadcn/ui and MUI, currently piloting with a real clinic - a project I designed, built, and shipped on my own initiative.
- Engineered a custom weekly scheduling calendar UI: absolute-positioned event blocks with computed time-to-pixel layout and equal-width lanes for overlapping bookings.
- Wired the frontend to a 10-module REST API with JWT auth and OWNER/STAFF role-gated views; TanStack Query for data fetching/caching, Zustand for auth state.

**JR Plus - E-commerce order management dashboard**

- Built a responsive admin platform for order, product, and analytics management behind role-gated access, including interactive Recharts dashboards displaying daily revenue trends and KPI cards.
- Integrated REST APIs and database views to power the front-end, with a normalization layer mapping 30+ free-text status values to 5 canonical states for consistent reporting.

**BSH Druginfo - Drug information management system**

- Back-office dashboard (13 REST endpoints, 6 PostgreSQL tables) with two-tier RBAC enforced at both middleware and the data-access layer to protect sensitive pharmaceutical records.
  - Image/PDF upload pipeline with MIME/extension validation.
- 

## EDUCATION

SAIT | Diploma in Software Development, with Honours | Calgary, AB | 2023–2025

KMITL | B.Eng., Mechanical Engineering | Bangkok, TH | 2016–2019
